

Material Information Sheet – Protective Over-Laminates

Description

Although many sign materials are resistance to weathering or abrasion, the inks can still become damaged or discoloured.

The use of a clear over-laminate film or lacquer can protect the print and extend the lifespan of inks and sign materials considerably.

Applications in Sign-making

Many applications benefit from the use of an over-laminate:-

- Floor graphics (i.e. printed graphics experiencing a high level of traffic)
- Signage intended for the maximum term (5 years +)
- Signage exposed to particularly aggressive conditions (for instance in a marine environment).
- Signage that is expected to be regularly cleaned

Special Grades

There are a wide range of laminates for specialised applications:-

- Ultra-matt finish
- Window laminates for printed glass
- Anti-graffiti

Availability

Most laminate materials are available ex-stock for a rapid-turnaround.

Contact Clarity Sign and Design for specific applications.
